

System Operating Group | E-Mail configuration

Reconfiguration of Mozilla Thunderbird

1. To deliver e-mails from outside the TF, you need to reconfigure the outgoing mail server settings. Open **Account Settings** in the **Tools** menu of your Mozilla Thunderbird and choose the **Outgoing server (SMTP)** in the accounts listing.
2. Choose the entry for the outgoing server of the TF and click on **Edit**
3. Set the settings for **Port** and **Connection security** as shown in Figure 1.
